

## Looking for an effective way to **STREAMLINE** your **BUSINESS PROCESSES**?

**We can help you!**

As institutions grow:

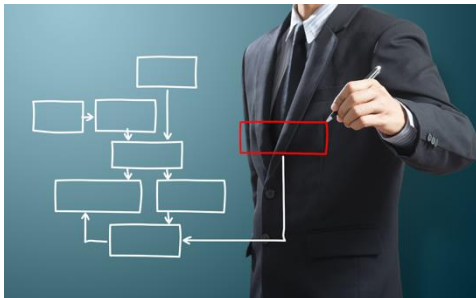

- The number and complexity of processes tends to increase dramatically
- Some processes are duplicated; others become redundant
- Data is often maintained in multiple locations and accessed by various stakeholders using a variety of system components and/or ad-hoc reporting tools

As a result, inconsistent information is often extracted from the institution's data; errors in interpretation can occur and, in general, productivity decreases and the potential for the introduction of further complexity increases.

### **How we can help: Business Process Review (BPR)**

During the initial stages of most major engagements, we frequently recommend that an institution undertake a Business Process Review (BPR) to identify and manage risks to the project, ensure minimal budget surprises, and build end-user satisfaction. BPRs can also be used as a "health-check" for the existing operations of the institution's manual and technology-based systems.

Benefits of a BPR include:

- ✓ Streamlined Operations
- ✓ Increased Productivity
- ✓ Eliminate Duplicate and Redundant Processes
- ✓ Data Rationalization and Consolidation
- ✓ Reduce Processing and Interpretation Errors
- ✓ Automation of Labour-Intensive Operations
- ✓ Increased End-User Satisfaction

**Contact us** to arrange a confidential and complementary consultation for you and your staff to determine if a Business Process Review can benefit your institution.
